"There is life on Mars, and it is us." *Ray Bradbury*

Caveat emptor: We are in beta. Please report bugs and other problems to contact@mannedmissions.com. Thanks!

1. Start downloading →
 - You can try it for free! See below.
2. Unlock the engine →
 - No PayPal account required.
 - You will receive activation credentials after purchase.

[for Mac \(43MB\)](#)

\$15

[for Win \(34MB\)](#)

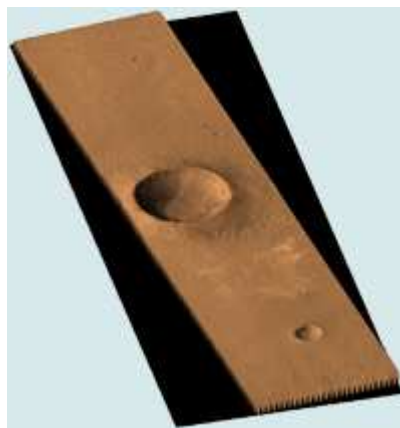

Launch & Early Orbit Price

If this price were a satellite it would be dangerously close to burning up in the atmosphere, that's how low it is. The cost will be going up as we move out of beta, so jump on it!

Try it for free

After installing the Mars Exploration Engine, you will be able to download the Zumba Crater dataset for free. It's 7 by 20 kilometers of amazing

geologic features at 0.25 meter resolution.

Zumba Crater

System Requirements

The Mars Exploration Engine is in its early days and we're still testing on multiple platforms. For now, here are some ballpark system recommendations:

- OS: Either Windows and Mac OS X. No Linux...yet.
- CPU: A modern multi-core CPU, 2GHz or above.
- RAM: 2GB is the minimum, 4GB will give you plenty of breathing room.
- Video: 512MB video RAM, resolution of 1280x720 or higher.
